The dark text editor is great for console-only users, whether you're working in a virtual terminal or just wanting a more interesting place to watch reruns of "The Office." Now there's a new dark vim theme that's actually quite pretty. The theme is inspired by Emacs and brings the familiar dark green to VIM. It's especially good if you're using VIM in a terminal session, because it better matches the color palette you're already using. The theme comes courtesy of Claudio Fleiner, and it's based on the dark vim color scheme. It's available for Windows and Mac, and it's free for public download.
